

# Clinical Skills Development Service

## **CROP: Cardiorespiratory and Orthopaedic Physiotherapy**

**The Cardiorespiratory and Orthopaedic Physiotherapy eLearning package** has been developed as an education resource for physiotherapists providing cardiorespiratory and orthopaedic services in Queensland Health hospitals. The package aims to promote safe, evidence-based clinical practice and is a supplement to the Cardiorespiratory and Orthopaedic Physiotherapy (CROP) face-to-face course delivered through the Queensland Health Clinical Skills Development Service (CSDS). Principles of assessment and treatment within cardiorespiratory and orthopaedic caseloads are reviewed, which are essential for physiotherapists providing hospital-based inpatient care and after-hour services.

### Participants

CROP is designed for all new-graduate physiotherapists and physiotherapists wishing to re-skill after a period of time working outside of cardiorespiratory / orthopaedic caseloads.
